## Amniotic Fluid Injection Research and Findings

Amniotic membrane and amniotic fluid injections are considered a new line of treatment for many wound care and inflammatory musculoskeletal disorders. Recent research has indicated that this injection treatment modality is a reliable and low-risk treatment option for these conditions.

The research effort remains very active in this field. As with any treatment modality, there are certain recommended conservative care modalities that should be employed prior to using Fluid Flow. Here are some recent studies.

[Randomized Controlled Trial of Micronized Dehydrated Human Amnion](#)

[Dept Veteran Affairs Study - Amniotic Allograft Reduces Joint & Soft Tissue Pain](#)

[ClinicalTrials.gov - Amniotic Injection Therapy in Shoulder Arthritis](#)

[Clinical Study - Amniotic Tissues for the Treatment of Chronic Plantar Fasciitis](#)

[Amniotic Injectable Research Data](#)

[Amnion Injection Therapy in Knee Arthritis](#)

[American Ortho Foot & Ankle Study - Comparative Study for Plantar Fasciitis](#)

[American Ortho Foot & Ankle Society Study- Amniotic Injection for Plantar Fasciitis](#)
